

IronAudit Pro - Linux Security Audit Report

Host: client-prod-01 | Distro: Ubuntu 24.04 LTS | Date: 2026-05-04T10:30:00+00:00 | Duration: 2.143s

Global Score: 34/100 (Critical)

Findings By Severity

Severity	Count
Critical	0
High	3
Medium	2
Low	0
Info	2

Technical Details

Check	Severity	Status	Title	Recommended Fix
system	info	info	System information collected	Use this inventory as baseline metadata for audit evidence.
updates	medium	warn	Pending package updates detected	Run apt update && apt upgrade on a validated maintenance window.
firewall	high	fail	UFW installed but inactive	Enable UFW with a deny-by-default inbound policy.
ssh	high	fail	SSH password authentication enabled	Set `PasswordAuthentication no` and use SSH keys.
ports	medium	warn	Multiple externally reachable TCP listeners	Review each open service for business need and network restrictions.
enabled_services	info	info	Enabled services inventory	Keep startup services minimal and aligned with system role.
permissions	high	fail	Sensitive world-writable paths found	Remove world-writable bits from sensitive paths (chmod o-w).

Command Examples

- sudo apt update && sudo apt upgrade
- sudo ufw status verbose
- sudo systemctl disable .service
- sudo ss -ltnp

Legal / Safe-Use Disclaimer

IronAudit Pro is intended for authorized defensive assessment on systems you own or are explicitly permitted to audit. It does not perform exploitation or active attack operations.
