

IronAudit Pro - Linux Security Audit Report

Host: sofiane-ROG-STRIX-G10CE-G10CE | Distro: Ubuntu 24.04.4 LTS | Date: 2026-05-04T13:23:25+00:00 | Duration: 0.907s

Global Score: 20/100 (Poor)

Findings By Severity

Severity	Count
Critical	0
High	6
Medium	3
Low	3
Info	12

Scoring Breakdown

Base score: 100 | Total deduction: 80 | Final score: 20 | Rating: Poor

Severity	Raw	Cap	Capped
Critical	0	70	0
High	87	45	45
Medium	25	25	25
Low	12	10	10
Info	0	0	0

Technical Details

Check	Severity	Status	Title	Recommended Fix
auth	low	warn	fail2ban not detected	Install and configure fail2ban for brute-force mitigation.
auth	medium	warn	PAM faillock policy not detected	Enable PAM account lockout controls with pam_faillock.
auth	info	pass	PAM password quality policy present	Maintain password complexity and policy review.
enabled_services	info	info	Enabled services inventory	Keep startup services minimal and aligned with system role.
enabled_services	medium	warn	Large enabled service footprint	Disable unnecessary services to reduce attack surface.
firewall	high	fail	UFW installed but inactive	Enable UFW with a deny-by-default inbound policy.
permissions	high	fail	Sensitive world-writable paths found	Remove world-writable bits from sensitive paths (chmod o-w).
permissions	high	warn	Potentially risky SUID/SGID binaries in unusual paths	Review ownership and necessity of SUID/SGID binaries in custom paths.
permissions	info	info	SUID/SGID inventory	Audit SUID/SGID binaries periodically and remove unnecessary ones.
ports	info	info	Open listening TCP ports inventory	Keep externally reachable ports to a strict minimum.
ports	high	warn	High number of externally reachable TCP ports	Reduce attack surface and block unnecessary ports using host firewall.

services	info	info	Listening services inventory	Keep service inventory minimal and reviewed.
services	medium	warn	Multiple network services exposed	Disable unnecessary services and restrict inbound access.
services	high	warn	Sensitive network ports exposed	Bind services to trusted interfaces and enforce strict firewall A
ssh	info	pass	SSH root login disabled	Keep root login disabled for SSH.
ssh	high	fail	SSH password authentication enabled	Set `PasswordAuthentication no` and use SSH keys.
ssh	low	warn	SSH service is listening	Ensure firewall rules restrict SSH access to trusted sources.
system	info	info	System information collected	Use this inventory as baseline metadata for audit evidence.
system	info	pass	Linux kernel branch appears modern	Maintain regular kernel and security update cadence.
system	info	info	System uptime captured	Correlate long uptimes with patching and reboot strategy.
updates	low	warn	Pending package updates detected	Run apt update && apt upgrade on a validated maintenance w
users	info	info	Interactive account inventory	Review interactive accounts and disable stale identities.
users	info	pass	No unexpected UID 0 accounts	Keep UID 0 restricted to root.
users	info	info	Privileged group membership	Limit privileged groups to required administrators.

Command Examples

- sudo apt update && sudo apt upgrade
- sudo ufw status verbose
- sudo systemctl disable .service
- sudo ss -lntup
